

Summary

Over 8+ years of IT experience in software design, analysis, development, testing and implementation of secure n-tier client/server web based applications using .NET Framework. Expertise in implementing applications using .NET Framework 4.8/4.7/4.6/4.5/4.0, ML.Net, .Net Core and C# as language. Hands on experience implementing model view controller (MVC) architecture with ASP.NET MVC Core Razor views, dependency injection (DI) and Entity Framework (EF Core) according to UI layouts and business requirements. Hands-on experience integrating Generative AI (GenAI) features into enterprise applications using ML.NET and ASP.NET Core, enabling personalized user experiences and intelligent automation. Proficient in web application development using HTML, CSS3, JavaScript, Angular 18, React, Bootstrap, jQuery and AJAX. Strong Knowledge in End-to-End Software Development Life Cycle, Application Development Methodology (ADM) and Agile Methodologies, ER Diagram.

Skills

Languages & Frameworks:

C#, ASP.NET, .NET Core, ML.Net, VBA, WPF, LINQ, Entity Framework, Razor View, Blazor, Web API, ADO.NET, MVC.

Frontend & UI Technologies:

WinForms, HTML5, CSS3, JavaScript, jQuery, React.js, Angular 18, Telerik Controls.

Databases & Data Access:

SQL Server, T-SQL, Stored Procedures, Views, Functions, PostgreSQL.

Tools & Platforms:

Visual Studio (2017/2019/2022), Azure DevOps, CI/CD, Docker, GenAI, Fast API, Tortoise SVN, TFS, Jira, NuGet.

Integration & APIs:

Web API, REST, Web Services, COM Interop, GdPicture SDK, Postgrid API.

Methodologies:

Agile (Scrum), SDLC, OOP, Design Patterns, Multithreading, Asynchronous Programming, UAT.

Experience

Geico Insurance, Chevy Chase, MD. | Duration: Jun/2025 – Till Date

Senior .Net Developer

Key Responsibilities:

- Implemented ML pipelines using ML.NET in C#, including sentiment analysis and classification, enabling real-time GenAI-powered insights within ASP.NET Core services
- Exposed ML-powered prediction APIs—wrapped in ASP.NET Core endpoints—to deliver low-latency inference as part of flight notification
- Orchestrated real-time data processing pipelines with Kafka and RabbitMQ, boosting insight generation speed by 40%.
- Implementing asynchronous processing in .NET 8 using async/await, Task Parallel Library (TPL), and background services to handle long-running operations without blocking HTTP request threads.
- Reengineering the back end with C# and ASP.NET Core Web API on .NET 8 to replace legacy VB.NET services and enable scalable, cross-platform development.
- Securing APIs using OAuth2 with JWT tokens to enforce role-based access and ensure secure communication between Blazor UI and the server.
- Develop User interfaces for Modern Rich Single Page intranet applications with Angular 18 and ASP.NET Web API.
- Built automated CI/CD pipelines using GitLab CI/CD and Azure DevOps, reducing deployment time and minimizing release errors.
- Integrated ML.NET workflows to enable predictive analytics and automated decision-making within the platform.
- Created comprehensive SDLC documentation, executed peer code reviews, and resolved user-facing technical issues.

- Deployed real-time AI workloads with Flask, FastAPI, and REST interfaces connecting to LLM endpoints.
 - Worked with SQL Server and PostgreSQL, designing schemas and optimizing queries for data integrity.
 - Migrate legacy .NET Framework apps to .NET Core to improve performance.
 - Developed Three-tier architecture with UI, Business, and Data Access layers.
 - Worked on ASP.NET client-side state management (view state, cookies, and query strings) and server-side state management (application state, session state, and profile properties) using C#.
 - Build reusable Angular 16+ components to speed up front-end development.
 - Participated in Agile/Scrum processes, CI/CD pipelines, and Docker-based deployments.
 - Used SQL Server extensively for writing complex queries, optimizing stored procedures, and improving overall database performance.
 - Collaborated with cross-functional agile teams with Product Owners and QA to deliver features in bi-weekly sprints using Scrum.
-

Avis Budget Group, Parsippany, NJ || Duration: Oct/2024 – May/2025

.Net Application Developer

Key Responsibilities:

- Analyzed, developed, and integrated ASP.NET applications with legacy VBA systems using COM Interop, ensuring seamless backward compatibility.
 - Extensively involved in developing components for Business and Data tier using C#.NET.
 - Implemented business, database access layer classes in C#.NET using UML class diagrams and sequence diagrams.
 - Used Entity framework Core to access data from SQL data sources
 - Graphical User Interface (GUI) was designed using ASP.NET Core MVC and the business logic was coded in C# [MVC Controllers].
 - Built and integrated RESTful APIs using ASP.NET Core Web API with full CRUD operations, incorporating Data annotation validation to enforce business rules.
 - Extensively Used. ASP.NET controls like Master Page Templates, Menu Controls, Grid View Controls and File Upload Controls.
 - Implemented Entity Framework 6 (EF6) and MySQL, optimizing database interactions, resulting in 25% increase in query performance and 15% reduction in database-related issues.
 - Created dynamic web interfaces using Razor Views, HTML5, CSS3, React, Bootstrap, and AJAX, enhancing user experience.
 - Developed Angular 14 Template driven forms and Model driven forms builder by using model.
 - Created Web API used to post back data to external client.
 - Involved in development of forms for Application Process and Selection process in Angular 14.
 - Implemented Web API CRUD operations and database connection by using Entity Framework and Object Mapper.
 - Used Visual Studio .NET IDE to design the forms, develop and debug the application.
 - Used Agile (Scrum) Methodology for rapid and more disciplined development during implementation.
 - Led the integration of ASP.NET features into VBA systems, streamlining user experience and cross-platform data handling.
 - Applied design patterns, asynchronous processing, and multi-threading to improve code performance and maintainability.
 - Communicated closely with system analysts to gather and refine requirements and ensured successful project delivery.
 - Created comprehensive technical documentation and provided production support for deployed applications.
-

IBeris GLocal LLC ,Edison,NJ || Duration: Sep/2022 – Aug/2024

.Net Developer(volunteering Developer)

Key Responsibilities:

- Developed web applications using Microsoft .NET Framework 3.5, C#, ASP.NET, LINQ, and SQL Server, ensuring responsive and interactive functionality aligned with user needs.
- Developed Windows forms using C# .NET for the purpose of high degree of interactivity.
- Developed ASP.NET caching features, configuring ASP.NET optimizations, securing ASP.NET web application.

- Used .NET Web API framework to create a RESTful APIs and Dapper to fetch data from our database.
 - Worked on Client-side validations using JavaScript, jQuery, and CSS3 for validation issues.
 - Worked on UI layer using HTML5, CSS3 to build rich, flexible and user interactive web pages.
 - Implemented Angular 10 formats view results using various controls and filters.
 - Provided seamless user experience by utilizing jQuery, AJAX and JSON to communicate with ASP.NET WCF web services and handlers without disrupting usage.
 - Used .NET framework for coding business logic and database logic using Entity Framework.
 - Developed, Deployed and maintained ASP.NET MVC Applications. Including .NET framework.
 - Designed and implemented complex database objects including tables, views, functions, and T-SQL stored procedures to manage and retrieve structured educational content and user activity data.
 - Created advanced stored procedures to fetch and manipulate data from multiple related tables, optimizing performance and reliability.
 - Utilized LINQ to SQL, LINQ to XML, and LINQ to Objects to enable efficient querying and manipulation of data within the application.
 - Involved in daily and weekly meetings to discuss various aspects of the code related to individual modules.
-

O Clock Software Solution, India || Duration: Sep/2020 – Jun/2022

Software Engineer

Key Responsibilities:

- Developed secure and scalable web-based healthcare applications using ASP.NET, C#, and SQL Server, ensuring compliance with healthcare industry standards.
 - Engineered N-tier architecture (UI, Business Logic, Data Access Layers) to ensure modularity, maintainability, and performance.
 - Used CSS and ASP.NET for designing the web pages, Master pages and user controls.
 - Developed various ASP.NET user controls and custom controls for the ASP.NET forms.
 - Designed the internal applications using C#, ASP.NET technologies.
 - Extensively worked on Consuming, Calling, Transmitting and Processing Web Services and WCF services.
 - Heavily used ADO.NET objects, Dataset, Data Table and Data Adapter for manipulating, retrieving, storing and displaying data from SQL Server.
 - Involved in creation of new WPF Browser Applications and maintenance of old ASP.NET modules.
 - Created dynamic web pages with ASP.NET, incorporating JavaScript, jQuery, HTML controls, Telerik Controls and client-side validation for interactive and user-friendly experiences.
 - Designed and optimized relational database structures for efficient storage and retrieval of clinical and operational data.
 - Developed stored procedures, triggers, and custom SQL queries to support critical operations related to patient records and appointments.
 - Utilized Team Foundation Server (TFS) for version control, task tracking, and collaborative source code management.
-

Chennovate Solutions, India || Duration: Jan/2018 – Aug/2020

Software Developer

Key Responsibilities:

- Collaborated with Agile Scrum teams to plan, develop, and deliver project features across sprint cycles.
 - Developed REST APIs using .NET Core and Entity Framework and maintained backend application services.
 - Built front-end features using Angular 10 and supported responsive application functionality.
 - Debugged production issues, performed root cause analysis, and implemented fixes to reduce downtime.
 - Troubleshot build and deployment issues and supported release activities with minimal disruption.
 - Coordinated product releases with development, QA, and support teams across global locations.
 - Used TFS for issue tracking and Azure DevOps for CI/CD workflows.
 - Participated in the full development life cycle, including analysis, design, development, unit testing, deployment, and sprint tracking using Jira or Azure DevOps.
-
